Abstract— Transport security has become a major issue around the world since the 9/11 attacks, and especially the train bombings in Madrid. This article gives an overview about the legislative and organizational control in the field of both public and freight transportation in the EU to protect them from terrorism and organised crime. Land transport subsections including road, rail and inland waterway and interfaces will be examined at all vulnerable points from infrastructure to passengers and goods. Our goal is to collect, to what extent and on which level is transport security covered by regulations, policies, standards, best practices, etc. An own categorization will be presented.

Key words— CARONTE, organised crime, regulation, terrorism, transport security.
